

# Manufacture in China

Computer aided design and engineering

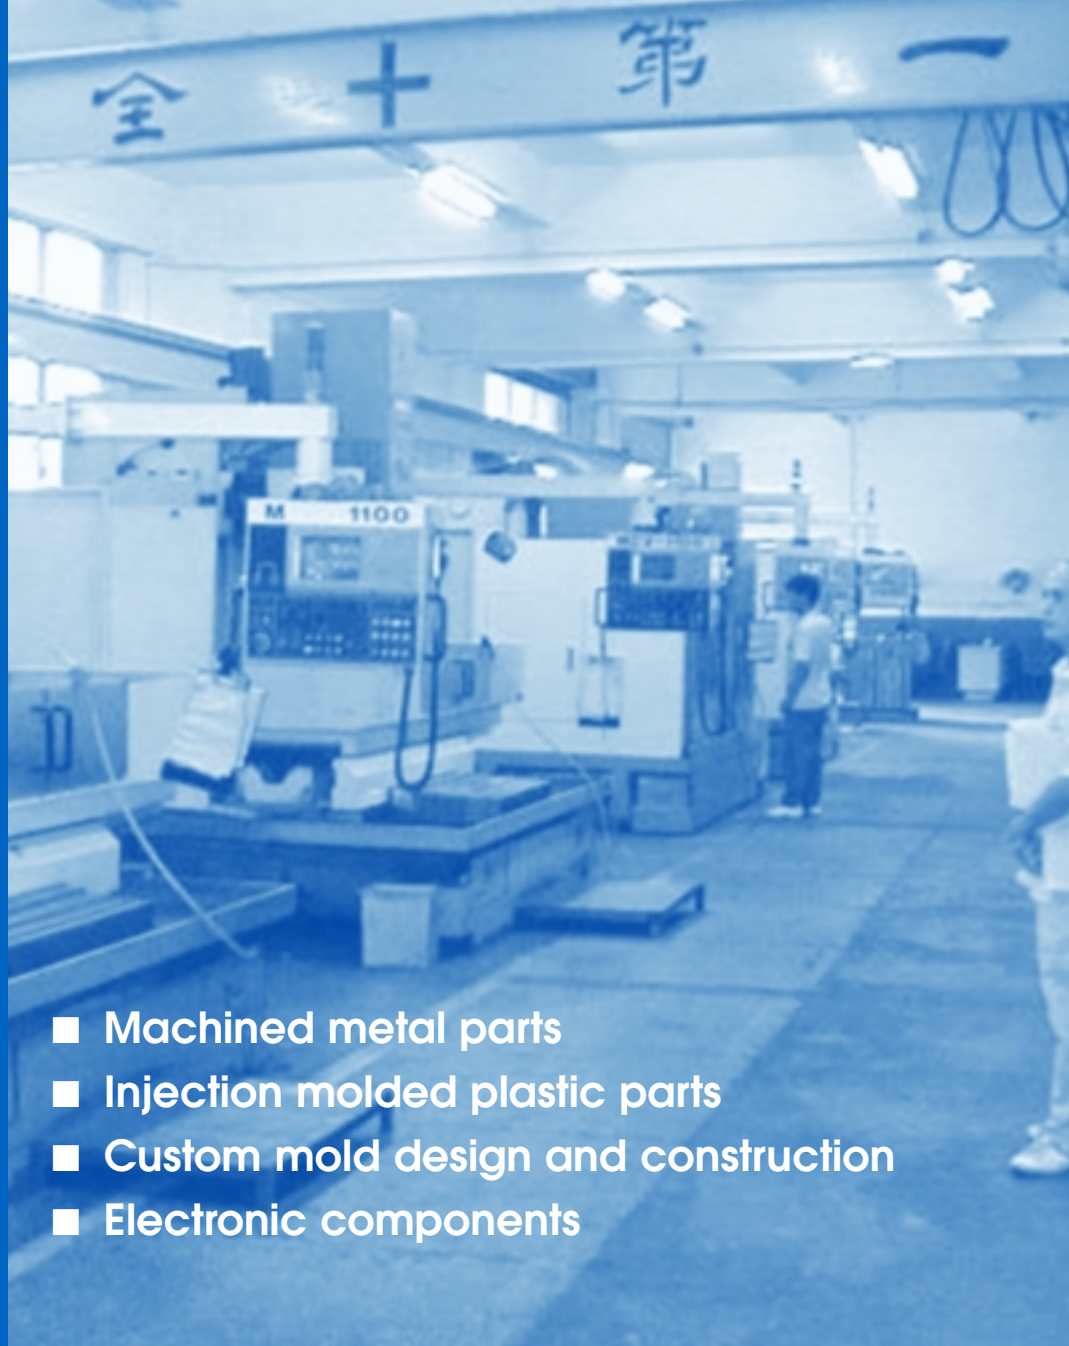

Custom machining and metalwork

Precision injection molding

*Direct factory representative*

- Machined metal parts
- Injection molded plastic parts
- Custom mold design and construction
- Electronic components

## Quality Manufacturing in China

Many leading U.S. companies have discovered the value of manufacturing key components and occasionally even completed products in China.

LHReynolds International represents a group of companies conducting management, engineering, and manufacturing activities in mainland China. From initial operations in Taiwan, these companies have developed to take advantage of China's ready availability of modern equipment and an educated and eager workforce. They have a proven capability to manufacture a wide variety of world-class precision components at the lowest available costs.

The capabilities of this group of companies include:

- **precision injection molding**
- **metal fabrication**
- **CNC machining**
- **custom mold & die**
- **electronic assembly**
- **product engineering**

Not a trading company, LHReynolds International instead serves as direct representative for the manufacturing group. This unique relationship permits LHReynolds to facilitate direct interaction with managers and engineers who can address your product needs. In addition, once manufacturing commences, you purchase directly from the manufacturing company, thereby eliminating intermediate trading margins and keeping your costs as low as possible.

Above are examples of quality plastic components produced by our molding operations for incorporation into a variety of electronic and recreational products. The mold making facility employs advanced CAD/CAM/CAE software and more than 400 professionals specializing in design, moldflow analysis, reverse engineering, and rapid prototyping to ensure the highest quality products.

To discuss specific product requirements and begin to discover how our companies can help you control or lower costs, please contact LHReynolds International today!
